

The world's leading brand of middlewave Infrared space and zone heaters from the market leader: Herschel Energy Ltd.

Herschel IR Heaters are used in "space" heating applications. These units are designed for spaces with walls beams or suitable brackets giving adequate clearance from the ground (2.3 - 2.5m) and from the ceiling above (minimum 0.3m). With input power requirements of 800 - 1950 watts these low watt-density heaters give a far higher equivalent heat output compared with hot air or gas-burning "space ray" type heating systems or other forms of electric heating often used in these environments. There are additional benefits:

As there are no exhaust emissions there is no requirement for planning; They operate silently and without fumes - consequently raising no health and safety issues; Installation is much cheaper than oil or gas alternatives - all you require is electric cable; No maintenance. You do not have to maintain a Far infrared heater once installed; You can "focus" the heat exactly to where you want it - because there is no convection of heat, none is wasted blowing into areas it is not wanted; Infrared has been shown to have positive effects on metabolism, being the same effect of heat we experience from the sun.

Space heating can be used anywhere there is a requirement to heat a large volume and where the heaters themselves can be placed well out of reach. So workplaces like workshops, industrial or commercial units, warehouses etc make ideal locations for heaters of this sort and we also provide a lower wattage variation for parasols and garden patios.

Herschel Inspire Far Infrared Heating panels and control products are developed & manufactured in the EU under strict European quality standards, and are certified to national safety standards. We issue a warranty of 60 months on all Herschel Inspire Far Infrared Heating panels.

This price list version 04.01-14 is valid from 1.4.2014 - prices exclude VAT and carriage - this price list supersedes all previous price lists and is subject to errors and changes.

Herschel Select FAR Infrared Heaters are a range of quality infrared heaters from the world market leader: Herschel Energy Ltd. They combine high manufacturing quality with modern heating elements in carbon-nickel with nano silver and nano copper technology. Herschel Select FAR Infrared Heaters are a value product for domestic and small commercial installations. They guarantee you a healthy warmth, high quality and elegant designs, to offer to you an extremely energy efficient and affordable way to heat your home or business. All Herschel Select heating panels are certified to national safety standards, covered by a 60 months guarantee.

The HERSCHEL SELECT White infrared heater is the most popular and versatile of the Herschel Select range, available in three different sizes with bespoke tailoring options as well. The unit can be wall or ceiling-mounted (making it ideal for passageways and office ceilings) and is available in stand-alone operation by use of a floor-mount as well. All units have carbon-nickel infrared elements and an aluminium rear case with mounting brackets. Available Wattage is 450, 600 and 900 Watt units.
